The HSS724 and HSS928 models offer superb maneuverability on smooth surfaces with 14IN tall pneumatic, sure-grip tires featuring a retooled, aggressive directional tread pattern. Both models have been redesigned with a larger blower diameter for increased snow removal speed, chamfered scraper for improved snow clearance and offer throwing distances of up to 49FT and 52FT for the HSS724 and the HSS928 respectively. They come standard with hydrostatic transmission, built-in LED headlight, fingertip steering control levers, offset blower shear bolt, 4-direction electric joystick chute control and automotive-style DC electric start with recoil back up.

Honda HSS928AATD & HSS1332ATD dual track drive models come standard with ice-breaking, heavy-duty, serrated augers. The auger shafts are bearing supported and the auger drive is equipped with an easily replaceable offset blower shear bolt. These track drive models are outfitted with a pneumatic, all-new auger height lever that adjusts to varying surface conditions with the press of a thumb. Larger impeller diameters increase snow removal speed and offer throwing distances of 49ft to 56ft depending on model. HSS928AATD & HSS1332ATD dual track drives come standard with hydrostatic transmission, built-in LED headlight, fingertip steering control levers, 4-direction electric joystick chute control and automotive-style DC electric start with recoil back up.
